ACHIEVEMENT:

Project Name: “Design And Fabrication Of Bearing Shaft Drive For Bicycle”

- Projection Description: A Shaft driven bicycle is the one that uses a drive shaft instead of chain to transmit power from pedals to the wheel.
- Shaft drives were introduced over a century ago but mostly implemented by chain driven bicycles due to the gear ranges possible with sprocket and derailleur. Recently, due to the advancements in internal gear technology, a small number of modern shaft driven bicycles have been introduced.
- Shaft driven bikes have a web like structure where the gears are mounted this will mesh with the drive Shaft.
- The shaft drive only needs a periodic lubrication using grease gun to keep the gears running quite and smooth. This chainless drive system provides smooth, quite and efficient transfer of energy from the pedals to the rear wheel.

Goals

My future goals for the next five years to gain experience or knowledge about the mechanical industries and become an independent embedded automation mechanical industrialist in the next twenty years.
